Professional Summary

AWS Certified Cloud Solutions Engineer & Software Developer specializing in GenAI platform architecture, cloud-native backend systems, and automated developer tooling. Experienced in designing production LLM workflows using AWS Bedrock, engineering multi-tenant event-driven microservices, and publishing cross-language open-source packages. Proven track record of optimizing infrastructure costs by up to 40% and automating cloud operations.

Technical Skills

- **Cloud & Infrastructure:** Amazon Web Services (AWS Bedrock, Lambda, ECS, S3, CloudFront, EC2, IAM, Security Hub), CloudFormation, Docker, Kubernetes, CI/CD (GitHub Actions), Infrastructure as Code (IaC)
- **Backend & AI/LLM:** Python, TypeScript, Node.js, Fastify, LangChain, Pydantic, Zod, REST APIs, Microservices Architecture, Event-Driven Systems
- **Databases & Tools:** MongoDB, PostgreSQL, Redis, Linux, Git, n8n, Postman, Automated Workflows

Work Experience

Software Developer (Cloud Solutions) — ASCP GPUonCLOUD | June 2024 – Present

- Architected and launched AI Cloud Insights, a GenAI platform leveraging AWS Bedrock to automate AWS infrastructure monitoring and cost management, reducing assessment overhead by 40%.
- Developed GenAI automation bots (SecurityBot, CostBot, Activity Assistant) to process natural language queries for real-time multi-cloud operations.
- Designed and executed Infrastructure as Code (IaC) templates using AWS CloudFormation, reducing client environment provisioning timelines.
- Engineered multi-tenant backend microservices in Node.js and Python, implementing serverless event-driven flows with AWS Lambda and EventBridge.
- Containerized core services using Docker and orchestrated deployments on Amazon ECS with AWS Fargate, driving 20–30% cloud cost savings for client workloads.
- Mentored cross-functional team members and implemented CI/CD best practices, increasing team productivity by 30%.

Projects & Open Source

agentic-gate — Creator & Maintainer (npm & PyPI) | Aug 2026

- Designed and published a cross-language validation engine in TypeScript and Python to enforce deterministic guardrails for LLM agent tool-calling.
- Integrated local Zod and Pydantic schema validation to intercept invalid arguments prior to LLM execution, eliminating agent loops and cutting cloud API overhead.
- Configured automated dual-registry deployments to npm and PyPI via GitHub Actions Trusted Publishers, maintaining 100% test coverage up to v1.4.0.

Personal Finance & Expense Automation Bot (Node.js, n8n, Telegram API) | 2025

- Built an automated expense-tracking system using n8n and Node.js that parses unstructured Telegram chat messages into categorized financial records.

Education

- **Post Graduate Diploma in Advanced Computing (PG-DAC)** — Sunbeam Infotech / C-DAC (2024)
- **B.Tech in Textile Engineering** — DKTE's Textile and Engineering Institute (2022)

Certifications

- **AWS Certified Developer – Associate** — Amazon Web Services (2025)
