

AKHILESH VARUTE

Software Engineer — Full-Stack & AI Systems

Pune, India | akhileshvarute23@gmail.com | akhileshvarute.me | linkedin.com/in/akhileshvarute | github.com/Akhilesh-Varute

SUMMARY

Software Engineer with 2+ years shipping production systems — full-stack development, distributed backend architecture, and LLM-powered applications. Primary engineer on acloudinsights.ai, a live multi-tenant SaaS platform, where I own the architecture end-to-end and lead a 3-person engineering team. Built a multi-cloud AI-cost analytics engine spanning AWS, Azure, and GCP, and a natural-language infrastructure-provisioning system using LLM tool orchestration. Comfortable owning a product from system design through deployment and production monitoring.

TECHNICAL SKILLS

- **Software Engineering:** Node.js, JavaScript (ES6+), Python, React.js, REST API Design, Microservices, System Architecture
- **AI / LLM Integration:** LLM Function Calling / Tool Use, Agentic Orchestration, Prompt Engineering, NLP
- **Infrastructure & DevOps:** Docker, Kubernetes, Crossplane / GitOps, CI/CD (GitHub Actions), Multi-cloud (AWS, Azure, GCP)
- **Data & Auth:** MongoDB, Redis, JWT, RBAC, Multi-tenant Architecture
- **Certifications:** AWS Certified Developer – Associate (DVA-C02) · AI Capabilities and Limitations (completion)

PROFESSIONAL EXPERIENCE

GPUonCLOUD (Expert Cloud Consulting) — Software Engineer

Jun 2024 – Present | Pune, India

- Primary engineer on acloudinsights.ai, a live multi-tenant SaaS platform: planned, designed, and shipped every feature end-to-end; lead a 3-person engineering team — own architecture decisions, run code review, and guide 2 junior engineers.
- Built a conversational analytics interface using LLM function calling / tool orchestration — the backend exposes structured tool schemas, the model parses user intent from plain English, selects the right tool, and the system executes real-time queries across multi-tenant infrastructure.
- Built a multi-cloud AI-usage cost dashboard normalizing spend and usage data across AWS Bedrock, Azure OpenAI, and GCP Vertex into a single consistent view.
- Designed a cost-anomaly detection engine analyzing 8+ cloud services in parallel, auto-ranking findings by estimated dollar impact (critical/high/medium/low).
- Architected secure multi-tenant access control — per-tenant data isolation with zero shared credentials, JWT authentication, and RBAC stored in MongoDB.
- Built a zero-downtime CI/CD pipeline (GitHub Actions) with production monitoring dashboards for API health, latency, and error rates.
- Designed and prototyped a natural-language infrastructure provisioning engine (Crossplane + Kubernetes): plain-English requests translated into GitOps-style resource declarations with drift detection.

PROJECTS

QuickResume — React, n8n workflow orchestration, LLM Integration (Claude) · github.com/Akhilesh-Varute/quickresume

- AI-powered resume generator that tailors resumes to job descriptions in under 30 seconds — React frontend, n8n workflow backend, Claude-driven keyword matching and ATS score analysis.

Dockerfile Optimizer & Security Scanner — Python · github.com/Akhilesh-Varute/dockerfile-optimizer

- CLI tool combining static analysis with AI review (Gemini) to flag Dockerfile security issues against the CIS Docker Benchmark and estimate image-size and build-time impact.

EDUCATION

Post Graduate Diploma in Advanced Computing (PG-DAC) — Sunbeam Infotech

2024

Bachelor of Technology — DKTE Institute of Technology

2022
